4. Test heat, cool, and defrost cycles
5. Check refrigerant level
6. Check air chute condition and air flow
7. Check fluids
8. Power wash unit (where applicable)

Mobil Delvac

COMPRESSOR AND VIBRATION MOUNT REKIT

Why this service helps:

- ✓ Early detection of worn internal compressor components prevents severe piston and cylinder wall damage leading to compressor failure.
- ✓ Early detection of worn motor mounts prevents excessive vibration on refrigerant lines attached to the compressor assembly which leads to complete loss of refrigerant causing loss of load conditions. Motor mount life expectancy is 8,000 engine hours.

\$600⁰⁰*

1. Rebuild all compressor valve plates
2. Replace all engine & compressor vibration shock mount kits
3. Check compressor end play
4. Inspect drive gears and coupler
5. Inspect compressor oil for contaminants
6. Power wash unit (where applicable)

WINTER REEFER UNIT FLUSH

\$175⁰⁰*

This service helps:

- ✓ Reduce engine hot spots caused by rust deposits and oil residue that leads to premature engine wear and even failure.
- ✓ Prevent rust and corrosion from forming on internal parts.
- ✓ Keep the engine operating at optimum temperature by dispersing heat through the radiator.

1. Drain old coolant & flush system with premium radiator flush
2. Replace old coolant with up to 2 gallons of premium antifreeze
3. Test heat, cool, and defrost cycles
4. Load test battery
5. Inspect coolant hoses
6. Power wash unit (where applicable)

* Specials do not include applicable state, local, & federal taxes. Service specials valid during normal business hours.
